EMPATHIZE PHASE

GOALS

1. Design a smart digital token system
2. Reducing physical waiting
3. Giving staff usable data to balance load across counters and hours
4. Understand customer needs by interviews and obstacles and create **Customer Journey Map**
5. Improving overall transparency

JIRA & TOOLS

JIRA has been integrated in this project

Our JIRA Project board:
DT-TEAM9

1 Define the situation

People visiting government offices (like PSKs, RTOs, municipal counters) for services such as passport applications, licence renewals, or certificate collection face long, unpredictable wait times with no visibility into their position in the queue. Most counters run on manual token or verbal calling systems with no historical data on footfall, leading to overcrowding, wasted hours, and frustration — especially for elderly visitors and those unfamiliar with the process.

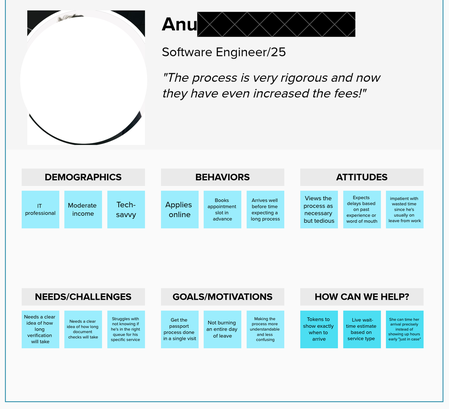

3 Customer Interviews

Interview 1 by

4 Customer Journey Map 1 DT-Team 9

4 Customer Journey Map 2

4 Customer Journey Map 3

5 List of problems

No visibility into wait time before or during the visit	Confusing service categories (fresh/ renewal/tatkal) not clearly explained at token stage	Conflicting information from friends/agents vs. official sources before the visit	No clear signage or guidance for first-time visitors on arrival	No accessible, local-language information source before travelling to the office	Arrives excessively early since there's no visibility into actual rush hours
No live updates once in queue — can't step away without risking his turn	Uneven load through the day, but no way to know peak vs. quiet hours in advance	Token categories not explained in simple, jargon-free terms	Ends up in the wrong queue and has to restart the wait after being redirected	Low comfort with digital/app-based token systems, no local-language support	No seating or priority for those who've travelled long distances
No confirmation of next steps or timeline after the counter interaction	Half a day of leave consumed for a process that could be shorter with better information	No priority or compensation given after a system/staff misdirection	No way to track licence/ test status remotely after leaving	Language barrier during the counter interaction risks missed documentation	No remote way to track certificate status, making repeat visits costly in wages and travel
